Your judgement is better than mine in deciding whether or not there really is motivation to put the peices together, since you have read the references and I have not. If you, in your scientist role, sat down with the references, would it have occurred to you to put them together to get the invention, if you did not already know about the invention? If the invention is not a method of cancer treatment, is there an enablement issue on how to use the claimed invention for purposes other than treating cancer?

Sorry for the socratic response, but I really can't substitute my ignorance for your judgement. MM

There are 3 sets of method claims using a chimeric construct consisting of two parts (one, prostate-targeting peptide and the other, lyis-causing anti-microbial peptide).

The first set of claim says "a method of directing an antimicrobial peptide in vivo to prostate tissue";

The second set of claims says "a method of inducing apoptosis in prostate tissue in vivo"; and

The third set of claims says "a method of selectively inducing apoptosis in normal prostate tissue"

The first and second sets were rejected by combination of primary reference showing prostate-targeting peptides are known in the art to direct cancer treating agents to prostate, by two types of secondary reference showing that there is a need in the prostate cancer treatment art for a method to reduce generalized side effects, and antimicrobial peptide has been used for cancer treatment. Combination of the primary and secondary references teach all necessary components of the products for directing something to prostate or inducing apoptosis in prostate.

In reply to OA, applicant argues that their invention is not drawn to method of cancer treatment and there is no motivation why one in ordinary skill would be motivated to do the purpose specified in the preamble of the claims. The most of the specification is about prostate cancer treatment using the chimeric product. Do I drop the rejection?

Examiner Misook Yu, Ph.D. 703-308-2454 (Phone) Art Unit 1642 CM1-8E18 (Room) CM1-8E12 (Mail Box)

                                                                           The present invention relates to homing pro-apoptotic conjugates, comprising of a tumour homing molecule that selectively homes to a mammalian cell type or tissue, linked to an antimicrobial peptide. The homing pro-apoptotic conjugates are selectively internalised by the mammalian cell type or tissue and exhibits high toxicity, especially to angiogenic vasculature. The antimicrobial peptide has low mammalian cell toxicity when not linked to the tumor homing molecule. The conjugates are useful for the treatment of cancer e.g. Kaposi's sarcoma, breast and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     is selected from prostate, lung, skin, retina, pancreas, gut, adrenal gland, liver, and lymph node. The peptide bind to the ne dipeptidase (MDP). ANY48618 to ANY49066 represent sequences are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Similarity 7; Conser
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               organ. The peptides can be used for identifying an organ for identifying a target molecule expressed by an organ or treating an organ or tissue pathology, where the organ

                                                                                                                         The patent discloses novel chimeric prostate-homing pro-apoptotic peptide which comprises a prostate-homing peptide linked to an antimicrobial peptide, where the chimeric peptide is selectively. Internalised by and exhibits high toxicity to prostate tissue and where the antimicrobial peptide has low mammalian cell toxicity when not linked to prostate-homing peptide. The chimeric peptide is used to direct an antimicrobial peptide in vivo to a prostate cancer, to induce selective toxicity in vivo in a prostate cancer, and to treat a patient with prostate cancer. The present sequence is mouse prostate homing peptide. This sequence is useful in the homing of pro-apoptotic
                                                                                                                                                                                                                                                                                                             WPI;

-i- PTM: PROBABLY POSSESSES THREE DISULFIDE BONDS.
-i- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M35 (ZINC
METALLOPROTEASE); ALSO KNOWN AS THE DEUTEROLYSIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- FUNCTION: THERMOSTABLE METALLOPROTEASE. SHOWS HIGH ACTIVITIES ON BASIC NUCLEAR SUBSTRATES SUCH AS HISTONE AND PROTAMINE.
-!- CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE OF BONDS WITH HYDROPHOBIC RESIDUES IN P1'; ALSO 3-ASN-|-GLN-4 AND 8-GLN-|-SER-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=91360097; PubMed=1886621;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 30, Application US/08434120
Patent No. 5635479
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Baker, Margaret A.
APPLICANT: Maloy, W. Lee
TITLE OF INVENTION: Treatment of Gynecological
TITLE OF INVENTION: Malignancies with
TITLE OF INVENTION: Biologically Active Peptides
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Carella, Byrne, Bain, Gilfillan,
ADDRESSEE: Carella, Stewart
ADDRESSEE: Cacchi & Stewart
ADDRESSEE: Cacchi & Stewart
TITLE OF INVENTION: USES Therefor NUMBER OF SEQUENCES: 89
CORRESPONDENCE: ADDRESS:
ADDRESSEE: Carella, Byrne, Bain, Gilfillan, ADDRESSEE: Carella, Byrne, Bain, Gilfillan, ADBRESSEE: Carella, Byrne, Bain, Gilfillan, STREET: New Jersey
COUNTRY: USA
ZIP: 07068
COMBUTER: New Jersey
COMBUTER: IBM PS/2
OPERATING SYSTEM: PC-DOS
SOFTWARE: DW4.V2
COMBUTER: IBM PS/2
OPERATING SYSTEM: US/07/908,455A
FILING DATE: 19920702
CLASSIFCATION NUMBER: US 0746629
FILING DATE: 13-APR-1991
APPLICATION NUMBER: US 07476629
FILING DATE: 18-APR-1991
APPLICATION NUMBER: 24,025
FILING DATE: 108-FEB-1990
ATTORNEY/AGENT INFORMATION:
NAME: Olstein, Eillot M
REGISTRATION NUMBER: 24,025
TELECOMMUNICATION INFORMATION:
TELEFAN: 201-994-1744
INFORMATION FOR SEQ ID NO: 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 21 amino acids
TYPE: AMINO ACID
STRANDENESS:
TOPPOLOGY: linear
MOLECULE TYPE: peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 62; DB 1;
